- Permutations: $n!$
- Combinations: $\binom{n}{k}$

2. Axiomatic def. of probability

- Definition of σ-algebra $\mathcal{F} \subseteq 2^{\Omega}$:
  1. $\Omega \in \mathcal{F}$
  2. If $A \in \mathcal{F}$ then $A' \in \mathcal{F}$
  3. If $A_1, A_2, \ldots \in \mathcal{F}$ then $A_1 \cup A_2 \cup \ldots \in \mathcal{F}$
- Properties of σ-algebra: $\emptyset \in \mathcal{F}$; if $A, B \in \mathcal{F}$, then $A \cap B \in \mathcal{F}$, $A \setminus B \in \mathcal{F}$
- Properties of probability:
  - $P(\emptyset) = 0$, $P(A') = 1 - P(A)$
  - If $A \subseteq B$ then $P(B \setminus A) = P(B) - P(A)$
  - $P(A \cup B) = P(A) + P(B) - P(A \cap B)$
  - $P(A_1 \cup \ldots \cup A_n) \leqslant P(A_1) + \ldots + P(A_n)$, equality for disjoint events ($A_i \cap A_j = \emptyset$ for $i \neq j$)

3. Conditional probability

- Definition: $P(A|B) = \frac{P(A \cap B)}{P(B)}$ for $P(B) > 0$
- $P(A \cap B) = P(A|B)P(B) = P(B|A)P(A)$
- Chain rule: $P(A_1 \cap \ldots \cap A_n) = P(A_1)P(A_2|A_1) \cdot \ldots \cdot P(A_n|A_1 \cap \ldots \cap A_{n-1})$
- Partition $A_1, \ldots, A_n$: $A_i \cap A_j = \emptyset$ for $i \neq j$, and $A_1 \cup \ldots \cup A_n = \Omega$
- Total probability: if $A_1, \ldots, A_n$ – partition: $P(B) = \sum_{i=1}^{n} P(A_i)P(B|A_i)$
- Bayes' rule: if $A_1, \ldots, A_n$ – partition: $P(A_i|B) = \frac{P(B|A_i)P(A_i)}{P(B)} = \frac{P(B|A_i)P(A_i)}{\sum_{j=1}^{n} P(B|A_j)P(A_j)}$

- If $A \perp B$ then $A \perp B'$, $A' \perp B$, $A' \perp B'$
- If $A_1, \ldots, A_n$ – independent then $P(A_1 \cup \ldots \cup A_n) = 1 - P(A_1') \cdot \ldots \cdot P(A_n')$
- Conditional independence (given C): $P(A \cap B|C) = P(A|C)P(B|C)$
- Random walk:

  - Prob. of reaching A:

$$P(A) = \begin{cases} \frac{b}{a+b} & (p = \frac{1}{2}) \\ \frac{\left(\frac{p}{1-p}\right)^a - \left(\frac{p}{1-p}\right)^{a+b}}{1 - \left(\frac{p}{1-p}\right)^{a+b}} & (p \neq \frac{1}{2}) \end{cases}$$
